ITRC20080729-01	Blue Cross/Blue Shield of GA	GA	7:23:00 AM	Paper Data	Medical/Healthcare	Yes - Published #	202,000
<p>Georgia's largest health insurer sent an estimated 202,000 benefits letters containing personal and health information to the wrong addresses last week, in a privacy breach that also raised concerns about potential identity theft. Blue Cross and Blue Shield of Georgia said Monday that the erroneous mailings were primarily Explanation of Benefits (EOB) letters, which include the patient's name and ID number, the name of the medical provider delivering the service, and the amounts charged and owed. "A small percentage" of letters also contained the patient's Social Security numbers, said Cindy Sanders, a Blue Cross spokeswoman. The EOB forms were mailed to the addresses of other Blue Cross policyholders.</p> <p>Attribution 1 Publication: Atlanta Journal Constitution Author: Andy Miller Date Published: 7/29/2008 Article Title: Private medical data exposed Article URL: http://www.ajc.com/news/content/news/stories/2008/07/29/bluecross.html?cxntnid=amn072908e</p>

ITRC20080728-06	Sealaska	AK		Electronic	Business	Yes - Published #	19,000

Sealaska Corp. arranged credit protection service for its shareholders after company data was stolen from one of its employees. Sealaska declined to provide details about the theft. Sealaska spokesman Todd Antioquia said he couldn't describe where, when or how the theft occurred, but he said it wasn't at Sealaska headquarters in Juneau. "We believe that unauthorized access to your name, address and Social Security number by the thieves is unlikely, but we cannot know for sure," wrote Chris McNeil Jr., president and CEO of Sealaska, in a letter to shareholders. Sealaska has 19,000 shareholders.

ITRC20080724-01	Saint Mary's Regional Medical Center	NV	4/28/2008	Electronic	Medical/Healthcare	Yes - Published #	128,000

Saint Mary's Regional Medical Center's database, used for Saint Mary's health education classes and wellness programs, contained personal information such as names and addresses, limited health information and some Social Security numbers. The database did not contain medical records or credit card information, said Gary Aldax, marketing manager for Saint Mary's. The potential breach was discovered in April 28. Saint Mary's officials said they immediately shut down the database and launched an investigation. The delay in notifications occurred because the database had to be reconstructed, Aldax said.

<p>Bristol-Myers Squibb Co. (BMY) said a backup computer-data tape containing former and current employees' personal information, including Social Security numbers and in some cases bank account information, was stolen recently. Family member data may also have been on the tape. The New York drug maker learned of the theft on June 4, and began notifying current and former employees by letter in the past few days, spokeswoman Tracy Furey told Dow Jones Newswires Thursday afternoon. The Bristol-Myers backup data tape was stolen while being transported from a storage facility. By letter dated July 11 to the NH AG, James M. Beslity, Senior Counsel, Global Privacy and Records Management Law Department, reported that the data on the tape were protected by a 12-character password "that it is readable and accessible only through the use of specialized software."</p>

<p>A password-protected laptop computer containing personal information for an estimated 2,500 or more current and former Indiana State University students was stolen during the weekend, the university reported today. The laptop contained data for students who took economics classes from 1997 through the spring semester 2008, estimated at more than 2,500 individuals. The information includes names and student identification numbers. Beginning in 2003, use of Social Security numbers as student ID numbers was discontinued in favor of university-specific identification numbers so some SSNs may be affected. The theft occurred Saturday while the professor was traveling in southern Indiana. UPDATE: Computer has been returned by mail</p>

<p>Responding to a tip on Tuesday, NEWSCHANNEL 3 found a dumpster full of Social Security numbers, names and addresses, all left out in the open for anyone to see. According to Michigan law, records containing personal information are supposed to be disposed of in a way that prevents the public from finding them, but that did not happen to these files. Nearly all of the files register to E.F. Mortgage of Portage, a business that NEWSCHANNEL 3 has been told no longer exists</p>

ITRC20080715-05	LPL Financial #5	US		Electronic	Banking/Credit/Financial	Yes - Published #	10,219

For the second time in a year, LPL Financial has experienced a major technology snafu, this time reporting that hackers "compromised" the logon passwords of 14 financial advisers and four assistants. The hackers' goal was to use the passwords to gain access to customer accounts in order to "pump and dump" penny stocks. The incidents, which began last July, affected 10,219 clients, Boston-based LPL said in a letter dated May 6 to Maryland Attorney General Douglas F. Gansler. Valuable private client information was at stake, Keith H. Fine, senior vice president and associate counsel of LPL wrote in the letter, as the hackers potentially could get their hands on clients' unencrypted names, addresses and Social Security numbers.

Reams of closing sale documents with money orders, SSNs, driver's license numbers and bank statements were left in an open garage of an unfinished home in a subdivision. The police felt it was a civil matter since the residents were trespassing when they entered the open garage to retrieve their documents. The community blames the builders. The company appears to be in violation of the Texas Identity Theft Protection Act of 2005, Section 48.102 which require they safeguard sensitive information collected.

ITRC20080715-03	Washington Metro Area Transit Authority	DC	6/9/2008	Electronic	Government/Military	Yes - Published #	4,700

The names and SSNs of nearly 4700 former and current employees were mistakenly posted on the transit agency's web site last month according to officials. The information was posted between June 9 and June 25, when the breach was discovered. The information was part of a solicitation from Metro to companies interested in providing workers' compensation and risk management services. The document mistakenly included the Social Security numbers of 4,675 employees. The names and Social Security numbers of a smaller group of employees also were posted in the lengthy document.

ITRC20080715-02	Weber Law Firm	TX	7/14/2008	Paper Data	Business	Yes - Unknown #	0

Harris County Sheriff's deputies uncovered hundreds of people's personal financial files in 32 boxes that had been discarded in a dumpster in northwest Houston on Monday. The records were mostly bankruptcy case files from a Houston attorney's office that found their way into a dumpster belonging to a Houston day care. The papers included personal financial records, documents with Social Security numbers, people's medical files and more. Local police said it was "no big deal" however the State AG said he could find plenty to charge the Weber Law Firm with. "If there were boxes of documents that potentially contained hundreds or thousands of names, that could potentially be hundreds or thousands of violations," Abbott said.

ITRC20080707-04	7-Eleven Stores- Citibank ATMs	NY	10/1/2007	Electronic	Banking/Credit/Financial	Yes - Unknown #	0

Police have uncovered a massive identity theft scam in New York City. Thieves have been stealing pin numbers and have gotten away with millions of dollars in cash. The theft came from Citibank ATM's located inside 7-Eleven convenience stores. Federal investigators say from October 2007 to March of this year three identity thieves were able to get cash from those ATMs conveniently without even touching the machines. "It looks like what happened was hackers got into a server that processes ATM transactions from Citibank-branded ATMs at 7-Eleven convenience stores," according to Wired, which first broke the story

In a District Court security breach, a contracted vendor released personal information on about 380 potential jurors to an employee's private e-mail address, court officials said Thursday. The information provided to the e-mail account could have included names, addresses, social security numbers and birth dates. After reviewing the matter, court officials determined much of the personal information released was incomplete. The information was transferred from the printing company that prepares jury summons notices to an unidentified employee's e-mail account. UPDATE- it appears that these people did not have return addresses or had moved out of state, leading to speculation among authorities that the employee may have accumulated the personal data in a scheme to help illegal immigrants enter the country.

ITRC20080702-02	New England Baptist Hospital	MA	12/1/2007	Electronic	Medical/Healthcare	Yes - Published #	9

A check forgery ring targeted patients at New England Baptist Hospital in Boston, using private checking account information and stolen identities to take as much as \$3,000 from each victim, according to hospital and law enforcement officials. So far, nine victims have been identified by the hospital, but more may have been targeted, officials said. The victims' checking accounts were raided between December and May, but they have since been reimbursed by their banks. The forgery ring appears to have used basic methods, according to Ruane and hospital officials: A hospital insider apparently took bank routing and account numbers from checks used by patients. The forgers then used popular check-writing software and magnetic ink - available at office supply stores - to create counterfeit checks.

Frontier Homes Arizona Project Manager Doug Stewart said Thursday that personal financial files of homeowners found outside of the old Frontier sales office did not belong to Frontier. The files were discovered by a resident who called police to notify them that the box of files was sitting out in the open near the old office, near Keller Drive and Miller Way. The company states that all files are in their hands. Maricopa police, however, collected more than a dozen files containing homeowners' financial information and began calling residents Thursday afternoon seeking to return them.

Texas Attorney General Greg Abbott has reached an agreement with two Austin companies that will protect Texans from identity theft. The settlement resolves the state's May 2007 enforcement action against EZMONEY, L.P. and EZPAWN L.P., which were charged with violating state laws governing the disposal of customer records containing sensitive personal information. Under Texas law, vendors must take specific precautions before discarding documents that include customers' bank accounts, driver's license and Social Security numbers.

A former D.C. public schools employee admitted in federal court yesterday that she and a friend stole the identities of 65 co-workers and job applicants as part of a scheme to open credit card accounts in their names. Prosecutors said the pair opened about 30 lines of credit with the stolen identities and charged at least \$40,000 for items including boys' coats, musical equipment and car service. The scam lasted a year and started in April 2006. As part of her job, she had access to documents that contained the names, birthdates and Social Security numbers of school employees and those who were applying for jobs, according to prosecutors.

For more than three years, the state Department of Administrative Services posted the Social Security numbers of individual contractors on a state Web site in violation of state law, exposing the state to lawsuits and monetary loss, according to a recently released state audit. The audit also uncovered that the Social Security numbers of prospective nursing employees were accessible on an agency Web site for 19 months until a complaint was lodged.

A metal box with encrypted backup tapes with billing records for 2.2 million patients and guarantors was stolen from a car belonging to a driver who worked for an independent storage company contracted by the health-care system. After moving them in a secure transport, he took them home where they were stolen from his car. He has been fired. None of the records contained credit card numbers but about 1.3 million patient records had SSNs. There's no evidence any of the information on the tapes has been accessed and anyone trying to use the tapes would need specialized equipment to view the contents, according to officials.

ITRC20080528-01	Hub City Ford	FL		Electronic	Business	Yes - Published #	33

A Niceville man was arrested and charged with 33 counts of fraud and grand theft. He worked for a car dealership called Hub City Ford in Crestview. A victim said that the personal information gave while car shopping may have been the cause of his identity theft which led to an investigation. Police determined McDonald would record the victims' names, dates of birth, social security numbers and other personal information when they visited the dealership. McDonald would then apply for credit in the victim's name using that information.

In yet another breach 13,000 Pfizer employees had their information potentially compromised when a company laptop and flash drive were stolen. The data breach, which occurred about a month ago, was the second this year affecting Pfizer Inc. employees and the sixth made public in a one-year span dating back to May 2007. More than 65,000 data-breach notifications have been sent out by Pfizer over the past year, including more than 10,000 to employees from Connecticut. The company said in an e-mail to affected employees late Friday that no Social Security numbers were on the laptop, but names, home addresses, home telephone numbers, employee ID numbers, positions and salaries were possibly compromised.

Three defendants have been charged in a federal grand jury indictment and complaint with illegally accessing the computer systems of a national restaurant chain and stealing credit and debit card numbers from that system, Assistant Attorney General Alice S. Fisher of the Criminal Division and U.S. Attorney for the Eastern District of New York Benton J. Campbell announced. The thieves hacked into cash register terminals at 11 restaurants around in the US. The defendants then sold the stolen data to others who used it to make fraudulent purchases or re-sold it to make such purchases, causing losses to financial institutions that issued the credit and debit cards.

ITRC20080512-02	RentWay - Rent-A-Center	FL	5/3/2008	Paper Data	Business	Yes - Unknown #	0

RentWay tossed personnel files in a dumpster early in May. Because RentWay is a subsidiary of Rent-A-Center, deputies contacted a Rent-A-Center store in Bradenton. That store called a Rent-A-Center in the shopping plaza where the former RentWay is located. Lt. William Vitaoli said it would not be a criminal violation to dispose of personal information such as Social Security numbers, credit card numbers, driver's license numbers or phone numbers. Rather than shredding the documents that contained personal information of clients and taking them to their own Dumpster, the employees left the papers piled in the bottom of the Dots' store Dumpster, Lash said. She said the Rent-A-Center store manager said there were personal documents in the Dumpster.

<p>A former U.S. military contractor has pleaded guilty to exceeding authorized access to a computer and aggravated identity theft after he was accused of selling names and Social Security numbers of 17,000 military employees, the U.S. Department of Justice said. The person who purchased the names and Social Security numbers from Craig was an undercover FBI agent, they said. Craig worked as a private computer contractor at the Marine Corps Reserve Center in San Antonio, Texas, in September 2007, and he had access to personal information of U.S. Marines in the center's database, the DOJ said. An investigation found that none of the information was sold to thieves or had otherwise been compromised.</p>

ITRC20080502-02	Target America- U C San Francisco Hospital	CA	10/9/2007	Electronic	Medical/Healthcare	Yes - Published #	6,313

Names, patient id numbers, departments treated and addresses were accessible on the Internet for more than 3 months last year but the University of California San Francisco is only now notifying those patients. UCSF had shared information on its patients with a vendor, Target America Inc., which mines electronic databases amassing information about a nonprofit's potential or existing donors.

Target America, whose Web site says it maintains "the highest standards of security," tunnels through millions of electronic records to help nonprofits identify and cultivate future donors as well as current donors "who could be giving you more." Additionally, it unearths financial information about donor friends and business acquaintances - even offering maps of a donor's neighborhood. The breach was discovered, said UCSF officials, when the hospital was alerted that a patient's name had been queried on the Internet "and it was listed in association with UCSF."

Hundreds of mortgage files were dumped in a public trash bin. The files included tax returns, pay stubs, bank account numbers, SSNs, names and other data. Cove Creek's owner had abandoned his Englewood office in January, and property managers had not been able to find him, investigators said. On Saturday, the property manager had a cleaning crew clean out his office and throw all items from the office -- including complete mortgage files -- into two Dumpsters.

Affected entities: Coos County and South Coast Hospice & Palliative Care in Coos Bay are among the four so far identified.

A computer owned by an accounting firm working for Coos County was stolen from a locked vehicle. It may have contained employee names, SSNs and other personal information. Some of the information may have been on the laptop since Oct. 2007. Via an e-mail correspondence with The World, Shirley MacAdam said the March 5 letters were sent to the 482 employees of four clients — only one of which was a public agency. She demurred from identifying the clients involved, but further investigation revealed the County and South Coast Hospice & Palliative Care in Coos Bay are among the four.

A stolen computer is causing General Internal Medicine of Lancaster to notify 12,000 of its patients. The computer contained names, SSNs, and addresses of patients from 2005-2007. According to Summers, office workers on April 17 were taking paper records bearing basic patient information and scanning them into a laptop computer so the records could then be transferred to a disk. After that process was completed, the office planned to burn the paper records.

ITRC20080424-05	LendingTree	MD	2/5/2008	Electronic	Banking/Credit/Financial	Yes - Published #	56,000

Charlotte-based LendingTree said outside loan companies may have accessed 56,000 MD based consumer's SSNs between Oct. 2006 to early 2008 and used it to market their own mortgages to LendingTree customers. According to a Q&A sent to customers, "several former employees" may have shared confidential passwords with "a handful" of lenders that were not approved by the company. The lenders then used those passwords to access customer information files that contained mortgage request data such as name, address, e-mail address, phone number, Social Security number, income and employment information. The files did not contain credit card information, LendingTree said.

Update: As a result of the breach, LendingTree has sued three California lenders: Newport Lending Group and Sage Credit Company, both of Irvine, and Home Loan Consultants of Newport Beach.

ITRC20080424-02	Univ. of Texas Health Science Center at Tyler- CBE	TX	4/17/2008	Paper Data	Medical/Healthcare	Yes - Published #	2,000

Some 2,000 medical bills were mailed around East Texas last week with patients' Social Security numbers visible on the envelope after a technical glitch skewed billing at the collection agency used by the University of Texas Health Science Center at Tyler. The breach is the fault of a subcontractor, CBE Group Inc. The number of area residents whose numbers were exposed isn't known because multiple bills could have gone to one patient, said spokeswoman Rhonda Scoby. The Social Security numbers were never floating around the public, but were sent from secure sites at UTHSCT to CBE and then straight to the post office and to the patient's home, she said.

<p>A computer server containing Social Security numbers, some medical codes, and other personal information of 700,000 people was stolen last month from a Southside debt-collection bureau in what appears to be the largest computer security breach ever in Indiana. The information includes customer-billing records for about 100 Indiana businesses, including Citizens Gas & Coke Utility, St. Vincent Health and Methodist Medical Group. The exposed data was limited to past-due billing information that had been turned over for debt collection to the Central Collection Bureau, the agency announced Friday. Customers whose accounts were in good standing were not affected.</p>

<p>The Connecticut State University System announced Wednesday a laptop computer that was stolen from a vendor contained the data of about 3,400 current and former students from the four state universities, including Western Connecticut State University. The computer was password-protected but contained unencrypted files with personally identifiable data, including names and Social Security numbers for certain students who attended Central, Eastern, Southern and Western Connecticut State universities between September 2001 and December 2004. SunGard Higher Education, provider of the state system's student data management software, informed officials April 9 that a laptop computer owned by SunGard and in the possession of one of its employees had been stolen.</p>

<p>The confidential information of tens of thousands of University of Miami patients was stolen last month when thieves took a case out of a vehicle used by a private off-site storage company, UM said Thursday morning "Anyone who has been a patient of a University of Miami physician or visited a UM facility since Jan. 1, 1999, is likely included on the tapes," the university said in a news release. "The data included names, addresses, Social Security numbers or health information. The university will be notifying by mail the 47,000 patients whose data may have included credit card or other financial information regarding bill payment." ITRC is counting this as 2.1 million due to the loss of medical records and not just financial records.</p>

About a year ago a computer server that contained personal health and pharmacy information including member ID numbers and in some cases SSNs was not properly secured by a third party vendor. There may have been a second problem on Dec 27, 2007. It appears to affect people in various states. There is some question if this breach is linked to the WellPoint breach since it is a subsidiary of WellPoint.

A man who worked in the admissions department at a prestigious Manhattan hospital has been charged with stealing and selling information on nearly 50,000 patients. Dwight McPherson, 38, a former worker at New York-Presbyterian Hospital/Weill Cornell Medical Center, was arrested Friday night, shortly after the hospital announced the security breach. McPherson was arraigned yesterday at a federal court in Manhattan. Prosecutors said McPherson exploited his access to the hospital's computer system to acquire lists of patient names, phone numbers and Social Security numbers over a two-year period.

Federal officials said a former state employee who took applications from people seeking food stamps and other welfare aid worked with three others to steal the identity of Utah residents and charge tens of thousands of dollars in purchases. Authorities unsealed indictments against four individuals, including one state employee. Authorities said Bustamante had worked on and off with the DWS as early as 2000 and recently had worked as an eligibility specialist, taking applications from Utah residents applying for food stamps, financial aid, child care programs including CHIP and Medicaid. Deputy DWS Director Christopher Love said Bustamante had access to a database containing personal information from as many as 1,775 individuals, including addresses, Social Security numbers and images of bank statements.

Social Security numbers for more than 1,200 participants in a National Institutes of Health study were stored on a stolen laptop containing their medical records, putting those patients at risk of identity theft, agency officials said yesterday. Originally, it was thought that the laptop did not contain any SSNs or financial information. But an ongoing review of the computer's last-known contents has found a file had been loaded onto the laptop by a research associate. That file included Social Security numbers for at least 1,281 of the 3,078 patients enrolled in the multi-year study, which is sponsored by the NIH's National Heart, Lung and Blood Institute. The laptop was stolen from a researcher's car on 2/23/2008

ITRC20080407-02	Univ. of CA at Irvine	CA		Electronic	Educational	Yes - Published #	7,000

UC Irvine police and the IRS are investigating what appears to be a larger national case where students SSNs are being used to file fake tax returns. 93 Irvine students have now been told that they could not file an electronic return because one had already been filed. It appears that graduate students or former graduate students between 2004 and 2007 are the ones whose data is at risk. All computer systems have been checked and there is no indication of a breach. UCI spokeswoman Jennifer Fitzenberger said UCI sent a campus wide e-mail alert March 20 and set up a page at uci.edu/identitytheftalert with information. There is also a news item on the university's home page, spokeswoman Cathy Lawhon said. The university has tried hard to alert all potential victims, she said. Henisey said outside contractors are being examined as a possible source for the leak, possibly including those involved with health insurance, employment and unions. UCI appears to be the only campus in the UC system or in Orange County that is having the problem
UPDATE: A data breach at United Healthcare Services may be the cause.

ITRC20080331-03	San Quentin Prison	CA	3/4/2008	Electronic	Government/Military	Yes - Published #	3,500

A flash memory drive containing names, birth dates and driver's license numbers of more than 3,500 people who either volunteered or visited San Quentin State Prison in a group tour has been lost, a prison official said Friday. The flash drive was used to move the data each evening from the prison's administrative office near the parking lot to computers at the two entrance gates to the facility to allow guards to identify volunteers or groups, such as college students, that tour the prison, said Samuel Robinson, a San Quentin spokesman.

ITRC20080327-07	CVS Caremark	TX	4/1/2007	Paper Data	Medical/Healthcare	Yes - Published #	1,000

CVS Caremark Corp. will overhaul its information security system and pay the state of Texas \$315,000 to settle a lawsuit that accused the drugstore operator of dumping credit card numbers, medical information and other material from more than 1,000 customers into a garbage container in Liberty, TX.

Texas Attorney General Greg Abbott, who sued CVS last April, announced the agreement Wednesday. Records allegedly dumped by employees behind the store included credit and debit card numbers and prescription forms that contained customers' names, addresses, dates of birth and types of medications, Abbott has said.

ITRC20080327-03	BNY Mellon Shareowner Services	MD	2/27/2008	Electronic	Banking/Credit/Financial	Yes - Published #	4,504,690

BNY Mellon Shareowner Services lost a box of computer data tapes last month which included names, SSNs and some bank account numbers. Included in the group is Synovus Financial Corp. CT AG Blumenthal said the Bank of New York Mellon on Feb. 27 gave an unencrypted backup tape as well as nine other tapes to a storage firm, Archive Systems Inc. of Fairfield, N.J., which was assigned to store the information. But when a storage company vehicle arrived at the storage facility, one of the tapes could not be found. According to a letter from Blumenthal to the Bank of New York, a lock on the truck was broken, and the truck had been left unattended several times. More than 1/2 million people in CT are affected.

Update: More than 1300 SAIC stockholders are also at risk due to this breach (5/7/08, San Diego Union Tribune). Laura Luke, a spokeswoman for SAIC., said the tapes included information from a "very long list of clients" of Mellon in addition to those of SAIC. The number of shareholders affected is at least in the thousands. In Maryland, 4,690 shareholders from unidentified companies were affected, according to a March 20 letter to the Maryland attorney general from a Mellon attorney.

UPDATE: 4.5 million customers of People's United Bank also involved, SSNs, names, bank account numbers and any other bank record number involved. Confirmed by phone by ITRC. They were just informed 5/22/08

UPDATE: Courant reports 25 firms had info lost from this breach. The 25 companies identified Friday are: Bank of New York Mellon Corp., People's United Financial Inc., John Hancock Financial Services Inc., The Walt Disney Co., TD Bank Financial Group, Hudson United Bancorp, United Parcel Service Inc., Wachovia Corp., MetLife Inc., Hudson City Bancorp, Eastman Kodak Co., Burlington Resources, Provident Financial, Penn Fed Financial, ADESA Inc., Alcatel-Lucent, Odyssey America Reinsurance Corp., Seacoast Financials Services Corp., Viewpoint Bank, Diamond Shamrock, Sound Federal Bancorp, Big Lots Inc., Guidant Corp., New York Community Bancorp and ACE Ltd.

ITRC20080321-01	GA Dept. of Human Resources	GA	3/19/2008	Electronic	Government/Military	Yes - Unknown #	0
<p>The Georgia Department of Human Resources is taking extensive measures to alert current and former employees of a breach of confidential records that may expose personal employee information. As a precaution, DHR is urging current and former employees to carefully review all credit records and other financial account information. Employees potentially affected by the security breach will receive a letter from Rosa Waymon, Director of the Office of Human Resources Management and Development (OHRMD). The agency warns that the breach took place on or around March 19th. An external hard drive that stored a database containing identifying information such as names, social security numbers, birth dates, home contact and federal tax information was removed by an unauthorized person.</p> <p>Attribution 1 Publication: Atlanta Journal-Constitution Author: Craig Schneider Date Published: 3/27/2008 Article Title: Thief steals records of former, current DHR employees Article URL: http://www.ajc.com/traffic/content/metro/stories/2008/03/27/theft_0328.html</p>

The Social Security numbers of thousands of Oklahoma County residents are available on County Clerk Carolyn Caudill's website to anyone who wants to look, apparently in violation of federal law. The numbers are contained on numerous documents filed of record in the county and are easily found by anyone with computerized research experience. In December 2006, The Oklahoman reported on Caudill's efforts to make all county records available online. The story, in part: Almost all of some 8.7 million documents — 17 million pages — are online, from mortgage documents, mineral deeds, liens and other legal "papers," from original land patents granted after the Land Run of 1889 to last week's property deals, said Mark Mishoe, chief deputy for County Clerk Carolyn Caudill.

David Wright, 35, was arrested during a traffic stop wanted for drug-related charges. He was later identified as a suspect in defrauding Hotel Shilla guests. An ex-employee of a Desert Hot Springs hotel, which has been cited for not paying city taxes, was arrested last Thursday accused in credit card fraud at the hotel and at a restaurant. Authorities accuse Wright of acquiring credit car numbers of guests from the Hotel Shilla and customers at the Amore Restaurant in La Quinta. Wright was reportedly the head of maintenance at the Shilla.

Two computers with Medicaid patient information were stolen from the Texas Department of Health and Human Services. Stephanie Goodman, a spokeswoman with Texas Health and Human Services, said the computers could have contained personal information only on e-mails. The e-mails, however, would normally contain only an individual's case number, she said. It is unlikely those e-mails would have listed Social Security numbers, she said. "I can't say 100 percent that it wouldn't be on e-mails, but that would be the only way to have access to anything," Goodman said.

ITRC20080310-04	Central Florida Regional Hospital	FL	12/1/2007	Paper Data	Medical/Healthcare	Yes - Published #	30

About 30 patient medical records including medical histories, addresses, SSNs and insurance information were sold as scrap paper to a Utah teach for about \$20 from the Central Florida Regional Hospital. "Officials are chalking this u to a shipping error."
"In December, the box was one of three shipped to a Las Vegas company for a Medicare audit, said Kelly Ferrell, the hospital's risk manager. Hospital officials had been tracking the box since it was reported missing in Phoenix but had not contacted the affected patients, she said. Officials said they were unsure how the box made its way to Utah, though the package containing the records also had a document indicating it was "overgoods" — a package that was sold because the shipping company could not deliver it or find its owner."

ITRC20080307-01	Cascade Healthcare Community	OR	12/11/2007	Electronic	Medical/Healthcare	Yes - Published #	11,500

A computer virus may have exposed the names, credit card numbers, dates of birth and home addresses of more than 11,500 individuals who donated to Cascade Healthcare Community, the parent company of St. Charles in Bend and Redmond. The virus penetrated the computer system Dec. 11, and the hospital's information technology staff believed they had rebuffed it. But Feb. 5, they detected suspicious activity in the system and called in computer forensic experts to investigate. By Feb. 20, it became clear the information had been made vulnerable by the virus.

ITRC20080304-01	Kraft Foods	IA	1/15/2008	Electronic	Business	Yes - Published #	20,000

A company-owned laptop computer was stolen from an employee of Kraft Foods traveling on company business. That group of 20,000 includes employees from Davenport's Kraft Oscar Mayer plant. It is unknown how many employees of the Davenport facility were affected. The plant employs about 1,700 people.

Kraft Foods spokeswoman Cathy Pernu said the theft took place in mid-January and involved an employee who was working on a systems project. "It had migrating information that was transferring from one computer to another." She did not say where the theft took place, but said the employee does not work at the Davenport plant. "It contained the names and may have contained Social Security numbers," Pernu said.

ITRC20080228-02	Marshfield Clinic-Health Net Federal Services	US	12/25/2007	Electronic	Government/Military	Yes - Published #	103,000

NewsCenter 13 has learned local doctors may be at risk for identity theft. The risk involves a national health insurance company and more than 100-thousand doctors in Wisconsin and ten other states. The states involved include Wisconsin, Michigan, Illinois, Indiana, Ohio, Pennsylvania, Tennessee, Iowa, Missouri, Kentucky and West Virginia. The Vice President at Marshfield Clinic confirmed Wednesday afternoon that social security numbers for his doctors and thousands of others all over the Midwest were posted on a website, accidentally. Director of Communications, Molly Tuttle, says the information was accidentally posted to the website for about two months, and involved doctors who had filed a claim with the company between September of 2005, and September of 2006. Dr. Doug Reding tells us the numbers were posted to a website by a company called Health Net Federal Services based in Rancho Cordova, California. The company is a government contractor that deals with health insurance for military families and veterans.

ITRC20080228-01	David Haltinner	WI		Electronic	Business	Yes - Published #	637,000

David Haltinner was sentenced to 50 months for aggravated identity theft and access device fraud. Mr. Haltinner had access to this credit card information by virtue of his responsibilities as an Information Security Analyst for his employer, and in fact had stolen all of the credit card information from his employer. He used an assumed online identity to sell approximately 637,000 stolen credit card numbers through a website frequented by individuals engaged in credit card fraud. Fortunately, Mr. Haltinner's two biggest customers turned out to be one undercover agent of the United States Secret Service in Nashville. Mr. Haltinner twice sold the same database of approximately 637,000 stolen credit card numbers with related names and addresses to the undercover agent, who was using two different online identities. In one of the transactions, Mr. Haltinner instructed the undercover agent to send a package to a false name at the address of Mr. Haltinner's employer in Neenah, Wisconsin. Agents of the Secret Service from the Milwaukee, Wisconsin Field Office placed the address of Mr. Haltinner's employer under surveillance when the package from the undercover agent was delivered and observed Mr. Haltinner carry the package to his car. This case was investigated by agents from the United States Secret Service's Nashville and Milwaukee Field Offices, with assistance from the Milwaukee Police Department. Assistant United States Attorney Byron Jones represented the United States.

Computers containing the private financial data including name, date of birth, SSN and deferred compensation balance was stolen from a private DWP contractor. Vince Foley, who serves on the board of the DWP Retired Employees Assn., said he has received anxious calls from retirees. The stolen computer equipment also contained financial data on employees who retired between July 1, 2006, and June 30, 2007. Mayor Antonio Villaraigosa's appointees on the five-member DWP commission on Tuesday plan to discuss the burglary, which occurred Monday in the Fullerton office of the data-processing company Systematic Automation Inc.

"It's the first time I've ever heard of anything like this because, typically, people outside of the DWP don't have that information available," Foley said. "DWP's computers are, of course, encrypted and protected. But this is a situation where they had . . . a consultant who's given all this data so they can prepare the [benefits] statements."

ITRC20080219-01	Crosslines Ministries of Cathage	MO	2/14/2008	Paper Data	Business	Yes - Published #	2,000

One of the largest aid agencies in Carthage was burglarized overnight Thursday night or Friday morning and files, containing the personal information of about 2,000 families, were stolen. Among the items stolen were paper files containing names, addresses, social security numbers and other personal information of 2,000 individuals served by Crosslines. "They stole files, hard copies, a whole box of papers from the ministry," Det. Kaiser said. "We can't say what else they took and we have no indication of why they took the box of papers in the first place or whether they knew what they were taking."

ITRC20080215-02	Texas A&M	TX	1/25/2008	Electronic	Educational	Yes - Published #	3,000

Computer records containing names and Social Security numbers of 3,000 current and former employees of two Texas A&M System agricultural agencies and the College of Agriculture and Life Sciences were inadvertently made accessible over the Internet. The file, which was accessible from a Web site for 21 days, was removed within a half hour of its discovery on Tuesday by information security personnel doing routine system checks, according to Dr. Mark Hussey, interim vice chancellor and interim dean of the College of Agriculture and Life Sciences at Texas A&M. The file apparently contained an 8-year-old record of employees of the Texas AgriLife Extension Service, formerly known as Texas Cooperative Extension; Texas AgriLife Research, formerly known as the Texas Agricultural Experiment Station, and the College of Agriculture and Life Sciences. An initial analysis of the records suggests the file did not include any employee hired after about May 1, 1999, Hussey said, but that review is not yet complete.

A missing laptop sparked an internal search that uncovered a second missing laptop belonging to Lifeblood Mid-South's primary blood supplier. In letters written by Lifeblood, donors from 1990 to the present are being advised to take proactive steps. The first laptop may have been missing for up to 3 months. Stored inside both computers were donor names, birth dates and addresses at the time of the individual's last donation or attempted donation. In most cases, Lifeblood said the donor's Social Security number was also stored, along with driver's license and telephone numbers, e-mail address as well as ethnic, marital status, blood type and cholesterol levels.

Half of Milwaukee Public Schools teachers are at risk for identity theft after a computer containing their names, Social Security numbers, birthdates and addresses was stolen, a teachers union spokesman confirmed Tuesday.

Around 3,000 MPS teachers are potentially affected by the breach because they're enrolled in a group disability insurance plan underwritten by the Union Security Insurance Company, said Pam Schiefelbein, a local plan administrator. The teachers' personal information was stolen from Administrative Systems Inc., which contracts with Union Security and others in the insurance and financial services industries.

A computer hard drive holding the names, addresses, birth dates and Social Security numbers of Modesto City Schools' 3,500 employees was stolen early Monday from a Southern California data processing firm, district officials said. The hard drive and three monitors were stolen at 4:30 a.m. in a "window smash" burglary, said Sgt. Linda King with the Fullerton Police Department. She had no information about witnesses or suspects. The burglary happened at Systematic Automation Inc. in Fullerton. The firm prints annual, customized statements for each district employee with a summary of his or her health and other employee benefits.

ITRC20080207-02	a Tukwila Hotel	WA		Electronic	Business	Yes - Unknown #	0

A Tukwila hotel clerk admitted in U.S. District Court Tuesday that he used his position to steal the identities of hotel guests. Stephen Smith, 25, of Tacoma, pleaded guilty to felony counts of wire fraud and aggravated identity theft. Between August and November 2007, Smith used the stolen identities to order about \$250,000 worth of Rolex watches, sports paraphernalia, Gucci handbags, cell phones, art and auto parts.

ITRC20080131-01	Tuolumne General Medical-PHNS	CA		Electronic	Medical/Healthcare	None - Encrypted Data	0

Nearly 800 former and present Tuolumne General medical customers should receive letters by this week informing them their billing information may have fallen into the hands of thieves. PHNS, a Texas-based insurance-billing firm that handles business operations for Tuolumne General Medical Facility, formerly Tuolumne General Hospital, under contract with the county, said up to 200,000 people, most in California, may be affected. The theft of four laptop computers and a desktop computer late last year at a PHNS office in Cerritos spurred the warning. Authorities have recovered two of the computers. Schunder said company computer experts determined neither of the computers' information had been breached. Billing information, not patient information, like medical records, was stored on the computers. Neither of the computers recovered had Social Security numbers on them, Schunder said. He was uncertain if the other machines did, but said the information would have been hidden through encryption.

ITRC20080130-01	Horizon Blue Cross Blue Shield New Jersey	NJ	1/5/2008	Electronic	Medical/Healthcare	Yes - (Password) Published#	300,000

Horizon Blue Cross Blue Shield of New Jersey has notified its members that an employee laptop computer containing personal information -- including Social Security numbers -- for about 300,000 individuals was stolen in early January. The health care insurer has sent letters to thousands of its members alerting them about the theft, which occurred in Newark, N.J. on Jan. 5. On its Web site, the company says a "security feature was initiated" on Jan. 28 that "destroys all the data on the stolen computer." Horizon Blue Cross Blue Shield of New Jersey says the personal information contained on the computer also included names and addresses of members, but no medical data.

ITRC20080129-01	Georgetown University	DC	1/3/2008	Electronic	Educational	Yes - Published #	38,000

A hard drive containing the Social Security numbers of nearly 40,000 Georgetown students, alumni, faculty and staff was reported stolen from the office of Student Affairs on Jan. 3, potentially exposing thousands of students to identity theft. The external hard drive, located on the fifth floor of the Leavey Center, was used to back up a computer that contained billing information for various student services, including activities fees and student health insurance, according to David Lambert, vice president and chief information officer for University Information Services. The files include all undergraduate students enrolled from 1998 through the middle of 2006. They also include postgraduates enrolled during that period who were assessed financial transactions that crossed between the main, Medical and Law campuses, such as student health insurance. Of the approximately 14,000 students currently at the university, roughly 7,700 - around 55 percent - had their private information on the missing hard drive, Lambert said.

ITRC20080128-11	Wake County Emergency Medical Services	NC	1/17/2008	Electronic	Medical/Healthcare	Yes - (Password) Published#	5,000

A Wake County Emergency Medical Services laptop computer with patient information disappeared from the WakeMed Emergency Department Thursday night, officials said Monday. The patient information was not cloaked by encryption, said Jeff Hammerstein, Wake EMS district chief. Computer experts say the lack of encryption makes it easier for identity thieves to access patient data from the laptop's hard drive. However it did have several layers of lesser security.
 Update: Count is now at 5000 and may include patients, firefighters and paramedics from across the county.

ITRC20080128-03	Kenyon College-Village Inn	OH	11/1/2007	Electronic	Business	Yes - Published #	32

In Gambier, OH and Kenyon College there has been a rash of identity thefts. Investigators are unsure of the source of the leak of credit card numbers. The Village Inn has been cleared and there does not seem to be evidence of a security breach at the college, the largest source of residents in the community. Both residents and students are reporting fraudulent charges in British Columbia and other places.
Update: As of 1/31 it is believed the breach originated from the Village Inn's computer system. According to Joan Jones, president and CEO of the People's Bank, sheriff investigations concluded that a hacker accessed the computer system of a Gambier business, acquired customers' credit and debit card numbers, printed physical copies of their cards and "start[ed] charging as fast and heavy as they can."

A vendor computer containing personal information on nearly 30,000 patients of Fallon Community Health Plan has been stolen, the insurer announced Thursday. The Worcester-based health insurer said Thursday that someone stole a vendor's laptop computer believed to contain personal information for members with Fallon Senior Plan and Summit ElderCare coverage. The data included names, dates of birth, some diagnostic information and medical ID numbers -- some of which may be based on Social Security numbers. The information did not include addresses.

ITRC20080116-05	Univ. of Wisconsin- Madison	WI	11/26/2007	Electronic	Educational	Yes - Published #	529

UW-Madison officials waited more than a month before advising more than 200 faculty and staff members of a potential exposure of their personal information on the Internet last year. The personal information -- including e-mail addresses, phone numbers and Social Security-based campus ID numbers of faculty and staff who made purchases from the DoIT computer shop -- had been accessible on a campus Internet site for at least a year, said Brian Rust, communications manager for the UW's department of information technology. According to a letter to the affected faculty and staff dated Jan. 7, UW senior legal counsel Nancy Lynch wrote that the university became aware of the problem on Nov. 26.

ITRC20080114-03	Rev. Donald Robinson	OH	1/4/2008	Electronic	Business	Yes - Unknown #	0

A clergyman is accused of stealing about \$300,000 from the church he led, taking money from a fund for the poor and stealing parishioners' identities before his imprisonment last year on unrelated charges. The Rev. Donald Ray Robinson, who was released from federal prison last month after serving time for wire fraud, was indicted Monday on charges of theft, securing records by deception, identity fraud and money laundering. An investigation began after parishioners of Lane Metropolitan Christian Methodist Episcopal Church found that Robinson used church property as collateral to obtain loans and laundered money through bank accounts, prosecutor James Gutierrez said.

A dining vendor's server appears to be the source of a data breach at California State University, Stanislaus. Credit card numbers, cardholder names and expiration dates were exposed, leaving hundreds, possibly thousands, of university students, staff and guests open to identity theft, with victims reporting fake charges on their cards, officials said Friday. Social Security numbers were not accessible, they said.

Investigators are determining how many people are affected. Credit and bank card transactions have been suspended in Stanislaus State's main dining hall, Mom's coffee shop and Pop's convenience store. Campus dining averages 2,500 customers and 300 to 400 charge transactions daily through Sodexho, the campus's food vendor.

About 5,000 students are taking winter term classes this month between the fall and spring semesters. It is possible the card information was stolen as early as the fall semester, when more than 8,800 students were on campus.in which personal credit and bank card information was exposed, the university said Friday.

Harvard University police and the Middlesex district attorney's office are investigating a security breach at the school after an undergraduate allegedly manufactured phony driver's licenses and university identification cards that can be used as debit cards and to enter residence halls, the university announced yesterday. The cards, which have a magnetic strip on them, are issued to Harvard students, faculty, and staff members and are encoded with an identification number. A person can put money on the ID cards, called Crimson Cash, and use them like a debit card to purchase items at stores on and off campus, buy items at campus vending machines, pay for campus laundry machines, and gain access to residence and dining halls.

U.S. District Judge J. Frederic Motz sentenced Robert Michael Stewart, 26, to an additional three years of supervised release for his role. Stewart sought to sell 325 folders of personal and financial information of people who had obtained mortgages, information he had access to from his job at a Pikesville mortgage company, U.S. Attorney Rod J. Rosenstein's office said today in a news release. The files included Social Security numbers, bank account and credit card numbers, copies of driver's licenses, tax statements, payroll and statement of earnings, and bank account statements.

ITRC20080111-05	Select Physical Therapy Texas	TX	10/1/2007	Paper Data	Medical/Healthcare	Yes - Published #	4,000

Investigators with the Office of the Attorney General discovered that Select Physical Therapy Texas Limited Partnership, also known as HealthSouth Rehabilitation Center, exposed more than 4,000 pieces of its customers' sensitive information, including Social Security numbers. The state's investigation was launched after reports from the Levelland Police Department indicated that bulk customer records were dumped in garbage containers behind a local building. Select Physical Therapy Texas Limited Partnership occupied the building until closing its office in October 2007. The records also included credit and debit card information.

ITRC20080111-03	Workers Compensation Fund	UT	12/9/2007	Electronic	Business	Yes - (Password) Published#	2,800

Officials with one of Utah's largest insurance companies are searching for a password protected stolen laptop containing Social Security numbers and other personal information for about 2,800 people and 1,400 companies. The computer was taken from a car parked in the home garage of an auditor for the Workers Compensation Fund (WCF) on Dec. 9. The Salt Lake City-based WCF provides worker compensation insurance coverage to more than 30,000 companies, representing about 61 percent of the businesses operating in the state.

Thousands of Health Net employees in Connecticut and other states have been notified that their names and Social Security numbers were on a laptop computer that was stolen more than a month ago from a company vendor. The laptop had information on about 5,000 employees companywide and an undisclosed number of health-care providers outside the Northeast. The company has about 1,600 employees in Connecticut. The laptop did not contain information on employees hired after Jan. 1, 2005.

Thousands of Central Florida day-care-center workers could be at risk of identity theft after burglars stole state computers containing personal information. Although the theft occurred two months ago, the Florida Department of Children and Families is just now notifying about 1,200 day-care providers that their employees, as well as center operations, may be at risk. Social Security numbers, birth dates and other information about day-care workers in Orange, Seminole and Osceola counties were among the data on five laptop computers that were stolen from the DCF office near Orlando Fashion Square mall in Orlando on Nov. 7-8.

A hacker has potentially compromised an unspecified number of customers that shop at Geeks.com. The compromised information included the names, addresses, telephone numbers and Visa credit card numbers. The potential affected population could be nationwide due to that nature of the business. The online technology retailer, whose formal name is Genica Corp., said in a warning letter that it discovered the system intrusion on Dec. 5.

ITRC20080110-02	Wisconsin Dept. of Health and Family Services	WI	1/8/2008	Paper Data	Government/Military	Yes - Published #	260,000

Social Security numbers were printed on about 260,000 informational brochures sent by a vendor hired by the state to recipients of SeniorCare and other state programs. The mailing was first reported by WKOW on January 8. The state Department of Health and Family Services issued a statement saying the mistake was the fault of EDS, a private vendor for state Medicaid services. Karen Timberlake, deputy secretary of the state department, said the mailing went to about 260,000 Medicaid, SeniorCare, and BadgerCare members.

ITRC20080110-01	University of Georgia	GA	12/29/2007	Electronic	Educational	Yes - Published #	4,250

University of Georgia officials announced that a hacker was able to access a server containing 4250 current, former and perspective residents of a university housing complex. The security breach happened sometime between Dec. 29 and Dec. 31. During that time, a computer with an overseas IP address was able to access the personal information - including Social Security numbers, names and addresses - of 540 current graduate students living in graduate family housing and 3,710 former students and applicants. University officials know what country the hacker was operating in, but would not comment on it, UGA spokesman Tom Jackson said.

2008 Breaches Identified by the ITRC as of: 7/29/2008

**Total Breaches: 395
Records Exposed: 19,596,647**

The ITRC Breach database is updated on a daily basis, and published to our website on each Tuesday. These reports only cover breaches that occurred in 2008, or became public in 2008, but were not public in 2007. Each item must be previously published by a solid media source, such as TV, radio, press, etc. The item will not be included at all if ITRC is not certain that the source is real and credible. We include in each item a link or source of the article, and the information presented by that article. Many times, we have attributions from a multitude of media sources and media outlets. ITRC sticks to the facts as reported, and does not add or subtract from the previously published information. When the number of exposed records is not reported, we note that fact. When records are encrypted, we state that we do not (at this time) consider that to be a data exposure.

The ITRC Breach Report presents individual information about data exposure events and running totals for the year. The ITRC Breach Stats Report develops some statistics based upon the type of entity involved in the data exposure.

This project was supported by Grant No. 2007-VF-GX-K038 awarded by the Office for Victims of Crime, Office of Justice Programs, U.S. Department of Justice. Points of view in this document are those of the ITRC and do not necessarily represent the official position or policies of the U.S. Department of Justice.
